Council Strikes The Estimates For The Year

Very Few Changes Made From Last Year

Town Council met in regular session last Monday evening with Mayor Cox in the chair and councillors Sanderson, Brydie, Davidson, Sangster and Davidson present.

After disposing of the minutes of the previous meeting Mr. Mayor Cox moved that a resolution be passed that the estimates for the year 1934 be approved as presented by the council.

An application for relief was received and referred to the Relief Commission for approval. An order for \$1,000 for the purchase of a new car for the council was also approved.

A letter from the School Board making formal application for the sum of \$11,573.21 for running expenses for the school for 1934, was read. The letter was accepted and approved on motion of council.

The secretary reported that two houses had reverted to the town for non-payment of taxes, one on Fifth St. and one on First St. and asked that rate of rent be set for same. The one on First St. was set at \$8.00 per month and the other was left over for investigation.

A rental of \$8.00 a month was set for the living quarters in Ornamental Iron building. The council took up the estimates for the year and dealt with applications for relief.

There were few changes made in last year's estimates, the total amounting to about the same.

The Prairie Premiers Meet at Saskatoon

To Discuss Plans Regarding the Wheat Agreement

At a meeting of the three prairie premiers held in Saskatoon last weekend for the purpose of discussing drafts of the proposed legislation to implement the London wheat agreement of 1929, tentative suggestions were advanced as to what form legislation will take.

It is expected that the three governments will bring down their legislation simultaneously and at an early date as possible so as to have it passed prior to a going on the land.

Plans for the elimination of cut-throat business methods were also discussed at the conference.

The Ladies' Auxiliary to the Canadian Legion will hold its monthly meeting in the I.O.O.F. hall on Tuesday March 6th at 2:30 P.M. Mrs. Lacey will be the hostess.

Quarry Lodge Holds Successful Social

Was Held In The Lodge Rooms Last Friday Evening

Officers and Members of Quarry Lodge entertained their friends to a social evening in their lodge rooms last Friday evening. Progressive bridge was played during the first part of the evening after which there was dancing. About midnight a nicely arranged lunch was served.

During the evening H. Champ one of their members who was leaving the following Monday for England, was presented with a token of remembrance. The presentation was made by Mr. Wm. Henderson, the oldest member of the lodge and one of the oldest masons in Canada, in his usual pleasing and impressive manner.

The Hall was nicely decorated for the occasion. The event was well attended and thoroughly enjoyed by all.

HIGHLIGHTS OF THE CENTRAL BANK ACT

The following are the highlights of the central bank legislation which was introduced in the federal house last week-end.

Name: The Bank of Canada. Head office: Ottawa. Capitalization: \$50,000,000. Shares offered the public at \$100 with the chartered banks held and no man allowed more than 20 shares.

Officials: Governor, deputy governor and seven directors to be chosen in the first place by the government.

The bank will issue paper money. The bank will perform the functions of a bank to rediscount for the chartered institutions.

It will take over the gold now held by the chartered banks as well as that owned by the finance department.

The bank will act as fiscal agent for the Dominion and night for the provinces.

The chartered banks will maintain deposits with the central bank.

The bank will not engage in business.

Dividends on capital will be limited to 6 per cent with all profits in excess going to the national treasury.

Shares will not bear the double liability features of ordinary bank stocks.

Bank of Canada notes will be redeemed in gold bullion.

Mrs. L. E. Johnson, who has been quite ill for the past few days is considerably better.

Mr. Sid Words of Piapot, spent the week-end here with his parents, Mr. and Mrs. G.H. Words.

Mrs. John Mitchell of Walsh was a visitor in town on Monday. The guest of her sister Mrs. R. Cann.

The Medicine Hat High School Dramatic Club is putting on "Arms and the Man" in Alexandra High School to-night and to-morrow evening.

Local Boy Scouts Attend Scout Rally

Was Held In Honor of The Scout Founder

Twenty-four scouts from Redcliff with their leaders Dr. Ward and Henry Sangster attended the Scout Rally held in the 3rd St. Armories, Medicine Hat Thursday evening. There were 150 scouts present to celebrate the birthday of the founder of the Scout movement, Gen. Baden Powell. Addresses were given by commissioners J. Knott and A. J. King. The boys had a camp fire and a sing-song and a generally good time. We understand there were 84 dozen buns consumed, which fact is sufficient evidence that the boys did ample justice to the refreshments provided.

Fairwell Party By S.A.R. For Ed. Champ

Was Presented With Gift by W. Balmer

The members and officers of the S. A. R. entertained on Friday evening in honor of Eddie Champ who left Monday for England. An enjoyable evening of games and dancing was participated in. A short program was rendered. Those taking part were Miss Sarah Davidson, Miss Verna J. Tremblay and Wilf Thomson with tap dances and Misses Tremblay and Learmonth with piano solos. After the serving of refreshments Mr. Wm. Balmer on behalf of the club presented Ed. Champ with a fine pen and pencil set as a parting gift. For which Eddie thanked the donors in appropriate terms.

Dancing was then resumed and much enjoyed. The music was provided by Geo. Kitchen and A. Podesta.

All Star Picture Coming to Monarch

Big Names Titled Hollywood Record in "Only Yesterday"

This is a year when the customer gets more star names for the price of admission than ever before. The "Grand Hotel," moving picture studio has centered more and more "name" talent in its casts, but Carl Laemmle has gone the limit.

The cast of "Only Yesterday," coming Monday to the Monarch Theatre, contains ninety-three names of actors known the world over. There never was a picture with such a cast. There probably never will be another one.

John Stahl was given carte blanche to secure just the proper player for every role whether it was important or unimportant. And Stahl is a stickler for the right actor in the right role. In addition to the 93 name parts, Universal used 4500 extras in "Only Yesterday" to make the picture the actors' and extras' delight. It has kept many a big hand from the Hollywood actors' door.

The Week at Ottawa

Ottawa, February 24th 1934

Nearly all the wheat from Alberta goes west to the port of Vancouver. In this district the price is about 18 cents per bushel less than the Port William price. The cost of shipping wheat from Port William to Montreal last year averaged 3.7 cts. per bushel. This is less than usual as the boat charges sometimes go up to 8 or 9 cents per bushel. The cost of shipment from Montreal to Liverpool is usually about 7 cts. It thus costs about 36 cts. per bushel to ship to the market at Liverpool. It is interesting to note that it costs 34 cts. per bushel to ship wheat from Port William to Montreal by rail. The wheat going west must pass through the Panama Canal. The toll at this Canal is about one dollar per gross ton, so that the average boat must pay about \$8,000 to \$9,000 for permission to go through.

The reciprocity problem came up this week and Mr. Bennett stated that informal negotiations had been going on for the past nine months. Just at present the Winnipeg market looks the Chicago market on some products. All are agreed that a Treaty should be arranged if possible, to give a better market for agricultural products of the Canadian West.

Each member is permitted to arrange for a fifteen minute discussion with the Governor General. This year I spent my time with him discussing the necessity of more Sugar Beet factories in the western irrigated areas. There is a 20c tax on every pound of sugar used in Canada. If this tax could be reduced to one cent for sugar made from home grown beets, private capital would be available for the erection of factories as the production of sugar would then be a profitable business. There is always a market and no chemist can tell the difference between sugar made from beets and sugar made from cane.

Canada is to have a Central Bank and this problem will likely be debated for weeks in the House of Commons. There will be objection taken to many provisions of the Act but even if the action comes late most people will agree that much good will result from the measure. The stock amounting to \$50,000,000 will be offered to the public. It is to yield up if the profits of the bank warrant such a dividend. If the public do not subscribe for all of this amount then the Dominion Government may take up the unsold balance. The Chartered Banks will not be allowed to subscribe for any of this stock nor will the "fictitious" be personally allowed to buy this stock.

Many are of the opinion that the Government is trying to have an election in the fall and with this in mind, the Civil servants are hoping that there will not be the usual 10% reduction in salaries. Many others in Canada wish they had salaries reduced if they were reduced by 10%.

Sincerely
F. W. Greshaw

W. M. S. Has Farewell For Mrs. H. Champ

Guest Was Presented With a Life Membership

A well attended meeting of the W. M. S. was held in Gordon Memorial Church last Thursday in honor of Mrs. H. Champ, who left on Monday for England where she will reside in future.

An appropriate presentation speech was made by the president Mrs. W. Thacker and Mrs. Lenning made the presentation of a beautiful brooch to Mrs. Champ. The brooch signified Life membership in the W.M.S. and may be worn only by members. It is the second to be presented to Redcliff, the first having been presented to Mrs. Geo. Dunnet, now of Ladner B.C. Mrs. Champ replied to the president's speech in a very heart-felt manner.

During the afternoon a solo was sung by Mrs. Balmer and a duet by Mesdames Morton and Shimmim.

Dainty refreshments were served by Mrs. H. Lenning and Mrs. Pow poured tea.

Scottish Company Coming to Empress

Will Show in Empress Theatre March 5th and 6th.

What is said to be the season's outstanding event is the tour of the Scottish Musical Players. This Company will appear in the Empress Theatre, Medicine Hat, Monday and Tuesday nights, March 5th and 6th, presenting "The Cotten's Saturday Night" and "The Bonnie Brier Bush" respectively. The former is adapted from Burns' poem and the latter is arranged from Ian MacLaren's writings.

The members of this company are outstanding artists and these two selections are so well known that lovers of this class of entertainment are assured of a delightful evening. Tickets will be on sale at Ping's Drug Store.

Redcliff Reminiscences

Taken From Our File of March 5 - 1915

France and Great Britain served notice on United States that they would hold themselves at liberty to stop all shipments hereafter to and from Germany.

In the past our industries have been charged a flat rate of \$10 for any switching, whether for one car or more. According to the new schedule the rate will be \$2.00 per car.

The Russians are continuing their progress against the Germans in North Poland.

For seven days the Canadians have been fighting against the Prussian Guard and Saxons in the first line trench.

The German Government has decided to refuse to grant any more safe conducts for American relief ships to touch at English ports for coal on the homeward voyage.

Government to Urge Reduced Wheat Acreage

Will Also Ask for Subsidy for Coarse Grain

Educational efforts will be utilized to induce farmers to decrease wheat acreage and endeavor will be made to have them turn to some extent to coarse grains, declared Hon. George Hoadley, minister of agriculture and health in discussing the London wheat agreement during the debate on the speech from the throne in the legislature on Wednesday.

Recalling the meeting of the prairie premiers at Saskatoon over the last week-end, the minister said that "the provinces will petition the Dominion government to reduce the freight rates on coarse grains to eastern Canada and British Columbia, to bring these rates on a parity with export rates so as to make the markets of eastern Canada and British Columbia available to the prairie provinces for such grains, and secondly, to ask the Dominion to subsidize any production of coarse grains sown on summer-fallow land this spring."

WANT TO EXPELL LABOR FROM C.C.F.

The United Farmers of Ontario have taken action to have the entire Labor conference of the Co-operative Commonwealth Federation in Ontario expelled from the C. C. F. declared Secretary H.H. Hannam of the U.F.O. last night.

In commenting on the executive of the Ontario Association of C. C. F. Clubs requesting the C.C.F. national council to expell the Labor body, Mr. Hannam stated the U.F.O. had acted similarly in a resolution last Saturday.

UNIVERSITY WINS DRAMATIC FESTIVAL

Results of the Alberta Dramatic Festival at Calgary last week-end gave first place to the University of Alberta Dramatic Club, presenting "Derelict." Medicine Hat Little Theatre Association placed second in "Suppressed Desires" and the Calgary Theatre Guild placed third in "The Undercurrent."

Mr. Roy Simpson was a week end visitor in Calgary.

Mrs. McCall of Edmonton, is guest of Mrs. W. King for a few days this week.

The Danish demonstration of physical training will be held sometime near the end of March Watch for exact date.

Adoption of a plan for teachers' pensions and unemployment insurance was urged upon the government by a delegation from the Alberta Teachers' Alliance, which interviewed Premier J.E. Bowline and members of his cabinet at the legislative buildings on Wednesday.

LOOK AT YOUR LABEL

Evidence Leads To Belief That There Is A Gradual Recession Of The Ice Caps At The Earth's Poles

Science is at it again, this time taking away the reputation of the Arctic. That report is getting warmer. Not much, it is true, but give it time—geologic time, that is. Recently it was discovered that the Corvill glacier, in Greenland, which in 1896 was four hundred miles north of the Arctic Circle, is now about three-fifths of a mile farther forward. Further it was found that in tundra districts of the northland the forest line is advancing at the rate of one mile a century.

However, it will be quite some time before skating will have to be abandoned, for there is a matter of five million square miles of ice at the Antarctic and 1,000,000 in the North, and, maybe, scientists give it a considered opinion that we are now living in the Quaternary ice age, which began about 900,000 years ago. They add, just in case there are some laymen who consider this a bit at the poles and elsewhere as a settled case, that there have been various ice ages and between times there are ice intervals which are measured by tens of millions of years.

When the ice melts it will mean a lot of increase in the oceans and perhaps in the lakes, and there is even danger that some sections of the earth will be completely submerged. But there is no need yet to build rafts. People dwelling in these parts, however, have no particular difficulty in looking forward to the time when the ice will be melted. They have evidence all about them of times long before this geological age, the old lake shores, in glacial remains, and in fossils that bespeak time of vast greenhouses where the white silence of the North now reigns.—Winning Free Press.

A New Milking Apparatus

Inventor Secures Patents On Non-Spillable Milk Pail

The new sanitary, non-spillable milk pail which, according to its inventor, Charles O. Gysler, 37, will have "positive" ball-valve, was explained to newspaper men at Winnipeg. When friend cow feels the urge to spill the milk with a well placed kick, it will be just what Gysler said.

Patents on the invention have already been secured at Washington. Gysler stated one United States manufacturing firm considers the patents worth \$25,000 to them.

An insect chamber on the back of the milk pail is the secret behind the revolutionary milking apparatus. After filling the chamber with water, Gysler demonstrated the "holding power" of his pail by kicking it across the room. No milk was spilled.

Poultry On The Prairies

Nearly Half Of The Poultry Of Canada In Prairie Provinces

That the prairies are appreciating the poultry route is being recognized, says the Dominion Poultry Husbandman, for in three years the poultry population of the three prairie provinces increased over four million, and in 1931 nearly one half of Canada's poultry was upon the prairies. In the whole of Canada there is only one province—Ontario—that has more poultry than Saskatchewan and Alberta. Of the millions of bushels of grain consumed by poultry each year, nearly one half of it is fed in these three provinces. In fact, the prairie was nearly as nearly as many heads of poultry as the provinces of Prince Edward Island, British Columbia, and Quebec combined.

Could Use Seven Million

British Columbia building requirements for provincial purposes alone in the next five years will be more than \$7,000,000, an unofficial survey conducted at the legislative building revealed. No special program could be financed by the province unless, however, it was stated.

"Last week a grain of sand got into my wife's eye and she had to go to a doctor. It cost me ten shillings."

"That's nothing. Last week a rat got into my wife's eye and it cost the 100 guineas."

Tests recently made in London show that typhoid marks as many as 80,000 egg strokes in an ordinary business day.

W. N. U. 2033

Medium For Peace

League Of Nations Still Best Instrument To Prevent War

International co-operation through the League of Nations is the world's best medium for peace, declared Dr. R. C. Wallace, president of the University of Alberta, in a recent statement. The league was in existence. Its machinery was adequate but education was needed to enlist the co-operation of the nations.

Before the Great War nations endeavored to maintain peace by the balance of power. This method failed as did other makeshifts to humiliate war through treaty-signing. After the war the world needed a new system, that of collective action. The League of Nations was established to settle disputes by law and arbitration, but was handicapped through the refusal of the United States to join.

The machinery for world-wide peace was established, said Dr. Wallace, but education was needed to force its use. Several issues had to be faced—how could nations be assured of reasonable room for expansion and growth; how could they have equality; how could different standards of living and value be adjusted? These problems must be faced in the spirit of collective endeavor, on no other foundation can permanent peace be maintained.

The machinery for world-wide peace was established, said Dr. Wallace, but education was needed to force its use. Several issues had to be faced—how could nations be assured of reasonable room for expansion and growth; how could they have equality; how could different standards of living and value be adjusted? These problems must be faced in the spirit of collective endeavor, on no other foundation can permanent peace be maintained.

Study Shows Baldwin Is Rich In Vitamins

The Massachusetts Experimental Station has recently started a study of the vitamin contents of the leading apples of the north-east.

Information on the Baldwin and McIntosh varieties has been published which shows that the Baldwin is a rich source of vitamin C, while the McIntosh supplies very little of this important food supplement. Spraying, with lime sulphur and arsenicals of food had no effect on the vitamin content. Fresh cider from the Baldwin was found about one-half as valuable as the fruit itself, while pasteurized or benzoinated cider lost practically all its value. Fresh apple sauce, both strained and unstrained, while lower than the juice in vitamin C, was useful, but in canned apple sauce vitamin C is practically destroyed.

Olive Grown Worried

Alfred Old From This Year's Crop Will Exceed Demand

Spanish olive growers predict a large surplus of olive oil from this year's crop, which is one of the largest in history. The 7,150,000 bushels of Spain which are covered with olive orchards will produce over 1,000,000 tons of oil, according to department of agriculture estimates. This is over 300,000 tons in excess of last year and nearly five times as much as five years ago.

Since the domestic consumption is hardly more than a quarter of a million tons, and since only about one-fourth of the excess can be exported, if the growers hope to show a legitimate profit the situation is causing much well founded worry to Spanish olive growers.

For years after its establishment the London Times was looked upon as less of consequence than the printing house in London to which it was an adjunct.

And it is as interesting at the back as it is at the front. The bottomless bag of tricks as can be in the red rabbit hair woolen mixture for school, college or town.

Carried out in black satin or in lovely taupe shade failed crepe silk is lovely after all.

Size 16 requires 3 1/2 yards of 36-inch material. Size 18, 20, 22, 36, 38 and 40 inches.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Graphic Description Is Given Of Conquest Of Mount Everest By Intrepid British Aviators

England Fighting Potato Bug

Common Colorado Beetle Is Giving Farmers Considerable Trouble

The Colorado beetle or potato bug, which made its appearance in some parts of the United Kingdom this past summer and caused damage to the potato crops and led to a campaign being begun for its extermination, is still causing uneasiness.

It has not been disposed of by any means, and in preparation for next season's attack on the crops the "digging" is in a manner that is somewhat upsetting to potato growers.

Tisbury, Essex, is the scene of the beetle's latest exploits, according to reports. While ministry of agriculture officials were sterilizing the soil near the docks, they found four beetles at a depth of two feet. The spot was near the allotment on which beetles were found in August.

Officials of the ministry have been at Tisbury for some time in connection with the matter. When the presence of the beetle is suspected, sporadic digging is carried out.

If the hibernating insect is discovered, the whole adjoining land is fumigated with carbon disulphide, injected by a kind of special hypodermic syringe.

One of the men, who has been fighting the beetle under the direction of the ministry said he had been occupied off and on, since 1st August. "We found several potatoes in different places," he said.

Idea Worth Imitating

Rhode Island School Children Interested in Planting Trees

Rhode Island is experimenting with a novel reforestation plan which will find many imitators if available funds over again become public for such things. It is an idea deserving to be on fire for future use.

On five acres of land donated to the town the school children of West Greenwich are planting 1,500 trees donated by the State Forestry Association. An expert forester bosses the planting job.

Thus a new forest to be planted—children schooled in forestry and the sins of reforestation brought home to an entire community. The school children will plant and cultivate their forest and protect it from insect enemies, and will go out into the world knowing more than their parents about trees.

With the constantly increasing importance of forestation the school forest constitutes a practical contribution to rural education. Without involving a large expenditure of public funds it furnishes an opportunity for public spirited citizens to make a valuable contribution to their community and to posterity.

Canadian Wall Paper

Exports Are High To Several Countries Including Japan

There must be a very large number of homes in the United Kingdom whose interior decoration is Canadian wall paper, for the export of that commodity to Great Britain is a large one every month. In December, for example, it was 53,000 rolls. The same may be said of Australia, New Zealand, and Japan, 32,000 rolls went. Japan uses considerable Canadian wall paper and the fact that Italy does also—the country of all countries that appears to us as a nation of artists—a testimony to the standard of that product of the Dominion. The December export was 99,500 rolls, compared with 86,768 in December, 1932. The 1933 export of 819,263 rolls was somewhat less than in 1932.

Jury Fined For Verdict

Because they acquitted Thomas Comanard on charges of running a numbers game, Philadelphia jurors were deprived of pay for their services. The jury fees for the ten men and two women amounted to \$131 each. "This is a miscarriage of justice," Judge Walsh remarked, "and a disgrace to yourselves, as well as to the community. Because of your outrageous verdict, I am going to charge you from further service and fine you your whole pay."

Greater London now claims a population of 8,202,818.

Although British aviators have conquered the roof of the world, soaring above Mount Everest in one of the "digging" is in a manner that is somewhat upsetting to potato growers.

Commodore Fellowes, who was leader of the Houston-Mount Everest expedition which sent two British airplanes over the hitherto uncharted mountain, spoke under the joint auspices of the Canadian Geological Society and the Ottawa Women's Canadian Club at the only lecture he will give in Canada.

Pointing to a tiny black patch on the rugged side of Mount Everest as seen in a vertical photograph taken in the famous flight, Commodore Fellowes said geologists who had studied the picture insisted it must indicate a lake of hot water in a region of rock, ice and snow. This was indeed a lure to attract explorers in the hope that they might prove or disprove the geologist's theory.

Using a series of remarkable still photographs and several reels of motion pictures, Commodore Fellowes carried his audience along every step of the expedition, from the preparation of the expedition in November, 1932, to the return of the two planes after their successful flight on August 2.

Months were spent in studying weather conditions, ascending the last possible day when a slight breeze made it possible to attempt seeing the mountain clear of clouds. Elaborate preparations were made to safeguard the personnel against the high altitude, a heavy scale over his head, each man wore a heavily padded uniform, equipped with oxygen supply, a microphone for talking to the ground and lined with electric wires for heat.

Observers, while clad in this paraphernalia, made a man feel as if he had pulled a heavy sack over his head, but to take pictures while standing in a 100-mile-an-hour wind, holding in their hands a 16-pound camera.

Political difficulties were overcome through the co-operation of the Maharajah of Nepal, who gave permission for the expedition to fly over his little-known country. However, the aviators were surprised in obeying the instructions of the secretary of state for India not to fly further into Tibet than was absolutely necessary, for the Maharajah told the people of that land over such acreage.

Commodore Fellowes summarized the venture for public spirited citizens to make a valuable contribution to their community and to posterity.

Prizes For Quality Bacon

Canadian Chambers Of Commerce Urged To Encourage Better Grade

Regina Board of Trade has put its shoulder behind the Canada Bacon policy and is offering a trophy for the best winter bacon listed by the Regina board, and is offering prize money of \$50 added to the regular classification for the best group of three hogs at the Regina fall show and the champion hog and sow of the Regina show. In addition to this they are suggesting to the Chambers of Commerce that there be united action by the Board of Trade for the bacon hog policy, and that each Board of Trade support similar encouragement in its own locality.

New Swimming Equipment

An inventor in France has designed equipment to enable man to swim as a fish. The invention consists of a couple of paddles attached to the hands, each covering an elliptical surface of 40 inches square, and a pessiere, bottle like apparatus, attached to the feet.

A man in Mexico who, at 163, has proved a digestive organ, and if to have eaten only dairy products at a time.

WHO KILLED PROSPERITY

(With apologies to
Mother Goose)
"Who killed prosperity?"
"I," said Boss Greed,
"With the rest of my breed,
I killed Prosperity."
"Who saw him die?"
"I," said Big Business,
"With many a sigh,
I saw him die."
"Who caught his blood?"
"I," said King Graft,
"It's part of my craft,
I caught his blood."
"Who'll make his shroud?"
"I," said Exploitation,
"It's my avocation,
I'll make his shroud."
"Who'll be the clerk?"
"I," said Hostility,
"In all probability,
I'll be the clerk."

"Who'll be chief mourner?"
"I," said Rapacity,
"I've that much sagacity,
I'll be chief mourner."
"Who'll dig his grave?"
"I," said Competition,
"It's been my ambition,
"I'll dig his grave."
"Who'll be the parson?"
"I," said Plutocracy,
"You'll need my sympathy,
I'll be the parson."
"Who'll toll the bell?"
"I," said Bad Politics,
"It is one of my tricks,
"I'll toll the bell."

All the people on earth
May wail with sincerity,
If these have their way,
With poor old Prosperity.

By K. M. M.

JUST FOR FUN

The inventions of Messrs.
Stoopnagle and Budd are not
only funny, but some will
probably be on the market.
The latest includes these: red, white
and blue, starch— for keeping
flags flying when there isn't
any wind. The ash-tray-electric
fan—you merely knock the ash
off your cigar or cigarette into
the tray, then turn on the fan,
which blows the ashes out and
keeps the tray clean. A cello-
phone haysack—so that you can
find a needle in it. An alarm
clock with half a bell, so that
when two people are rooming
together it wakes up only one of
them. Wet envelopes— which
eliminates the necessity of licking
stamps. An inverted light-
house— for submarines. The
key that won't fit any lock— for
retired burglars. The upside
down bureau—the flat part at
the bottom prevents your collar
button from rolling under it,
and the legs at the top serve as
book ends. Round dice— for
those who'd rather play mar-
bles. And the best of all the bunch
a cellophone umbrella, so that
you can see whether it is raining.

There is movement on now
to have two more sugar beet
refineries in Southern Alberta.
According to present plans one
is to be located in or near Leth-
bridge and the other at Brooks.

The PRICE GUIDE of CANADA

"What would it cost at EATON'S?"
is a standard of value all over Canada. Prices in
EATON'S Catalogue are accepted as the standard by
millions of Canadian shoppers just what value
they are obtaining for every shopping dollar.

For a Budget are set by this handbook of the West,
you can see at a glance the latest fashions in the smallest communities,
and the modern of all the world to the most isolated
town. Small wonder that the catalog of such
a big event eagerly awaited in hundreds of
hundreds of Canadian homes.

Concise descriptions, reliable information, exactly
shown illustrations and clear price markings make it
a "must" to "shop" from EATON'S Catalogue as well
as a guide.

EATON'S 1934
Spring and Summer
Catalogue is
now ready. If you
have not already
received your copy,
write for it today.

Would Not Mean Inflation

Some Change From Existing Order

Night Stabilize Currency
At the present time, there is outstanding something like \$173,000,000 of Dominion notes, against which gold held by the government amounts to about \$170,000,000, or about 40 per cent. The delegates to the World Economic Conference held at a gold reserve of 25 per cent against these notes should be sufficient. On that basis, therefore, the gold reserve held by Canada should permit of an issue of \$278,000,000 of Dominion notes, or approximately \$100,000,000 of notes in excess of the existing issue.

There are those who believe—and the prime minister appears to be of them—that this possible \$100,000,000 of extra notes should be issued, and it is argued by some that instead of issuing and selling notes to the public to take care of current government expenditures, the government ought to pay these debts with this \$100,000,000 of new currency. Others think that should be the case, but a program of public works. In either event, the money would be good money. And it wouldn't be inflation. It would be just like taking out of some of these things in our minds. No one wants inflation. Only a lunatic would want uncontrolled inflation. But we ought not to hold the idea that any change whatsoever from the existing order must mean inflation. "And we certainly ought not to be terrified by the mere word 'inflation.' The actual fact is that some of the most conservative of our men hope that the thing which is doing President Hoover in is laying the foundation upon which Britain, the United States and Canada may stabilize their currencies, and stabilize them with a gold content, and upon a gold standard that will work—Ottawa Journal.

Canada's Resources

Large Variety of Non-Metallic Minerals Found in Dominion

A variety of non-metallic minerals are found in Canada. The Dominion is the leading producer of asbestos, has the largest talc output in the British Empire, and is one of the three mica-producing nations. The Dominion is an exporter of talc, gypsum, salt, asbestos, diamonds, and grindstones, and a producer of sodium sulphate, natural gas, and artificial abrasives, magnesite, silica, moulding sands, soapstone, kyanite, and many others. Minerals known to occur rather extensively include beryl, chrome, sulphur (pyritic), volcanic dust, and garnet. The extent of these minerals is largely in the initial stages. To the foregoing should be added structural materials which are generally abundant in the Dominion, and which include clay, sand and gravel, limestone, granite, and marble. Occurrences of these are abundant in Canada and in the main are of excellent quality.

Harmless Explosion

But Taking Off Flashlight Photo Gives Impertinent Personages

A Scare
The Archbishop of Canterbury and the famed Coptic hierarch, \$500,000 fourth century Biblical manuscript, figured in a harmless explosion at the British museum recently.

His Grace was standing with Sir Frederick Kenyon, director of the museum, and distinguished clerics and laymen beside the clock wall, when a photographer proposed to take a picture.

Something went wrong with the flashlight apparatus. There was a terrific bang and the sound of shattering glass. The company jumped in alarm but no one was hurt, and the picture was taken with another apparatus.

Only Mulberry Leaves

Mulberry leaves, the food of the silkworm, are to be used, in making paper in a factory which is to be built in Shanghai, Kwantung Province, China. More than 4,000 tons of the leaves will be consumed every year, and as local growers will receive an additional profit of \$2.50 an acre the "new idea" will drop those who have suffered from the loss in silk prices.

An elderly lady was asked which she thought were happier, people who were married or people who were not.

"Well, I don't know," she said. "Sometimes I think there are as many in that ain't as ain't in this."

W. N. O. 2033

FAMOUS AEROPLANE COMES TO RUINOUS END

The Columbia, one of the most famous aeroplanes in existence and survivor of some dangerous flights in aviation history, has come to the end of a long trial run to be destroyed by fire at Wilmington, Del. This single-engine motorized veteran of the skies was built in 1925 and two years later made history in one of the early refueling endurance flights. In 1927, piloted by Clarence Chamberlin, the Columbia flew from New York to Kassel, Germany, in a non-stop flight over the Atlantic, to set a long-distance non-stop record of 2,911 miles. In 1930 she again braved the Atlantic, piloted by the Canadian aviator, Captain Boyd, and succeeded in landing on the Betty Island, off the English coast. Our pictures show the Columbia arriving at Croydon at the end of her second Atlantic trip. The fire that finished her was caused by a gas fire.

Bovine Tuberculosis Control

Re-Test Work Necessary In Order To Make Satisfactory Progress

Material progress has been made in Canada in the control of bovine tuberculosis, and the encouragement in the demand for action through the adoption of more aggressive and liberal policies has resulted in the Dominion Department of Agriculture obtaining the co-operation of public health bodies, dairymen and livestock owners. The demand for this work has increased, to such an extent that in recent years this problem has been the controlling factor in regard to the personnel and expenditure of the field divisions of the Health of Animals Branch. The work has exceeded the resources of the branch and it has consequently been necessary to limit the activities of the branch in this most important undertaking.

"I desire," says the veterinary director general, "to particularly point out that this work is accumulative. Herds under the single herd policy should be tested at least once annually, while, in area work, general tests may be deferred in areas with a negligible incidence of infection for a period of three years but no longer."

"We cannot hope to make satisfactory progress unless careful attention is paid to re-test work. With nearly two million cattle under the policies of the department of agriculture, re-test work has reached large proportions, and consequently the limit materially, the number of initial tests which can be undertaken with our present staff. In addition to the general re-tests in areas and the annual re-tests of herds under the accredited herd and supervised herd plans, initial tests of cattle for entry into these areas and herds must be undertaken."—St. Thomas Times-Journal.

Fortune From Pennies

Daughter Of Crimean Veteran Leaves Large Estate

Emily Smith, military old woman in England who lived in one of the poorest parts of Paddington on the upper reaches of the Thames, left an estate of more than \$250,000. It was shown when the will of the late spinster was probated.

It all started from pennies, too. She was the daughter of a veteran of the Crimea who was given charge of the famous Grand Marnet at Hampton Court palace, with the privilege of charging for admission.

The estate gathered by this means was largely increased by the shrewd investments of Emily Smith.

Good News For Patients

Ice cream every day for all children patients of Monmouth Memorial hospital at Long Branch, New Jersey, is provided for in the will of Park M. Woolley, of New York. Long Branch, Woolley, whose estate is expected to total several millions of dollars, died in New York on January 10 after suffering from arthritis for 10 years.

Wasting English Opera

St. Thomas Beecham, noted conductor and critic of the world of music, calls opera in England "a wasteful." "There is no future at all for opera here or for opera singers," he told the society of musicians, "and it is best to face the fact."

The shock of Paris is reported to have the most expensive automobile in the world, it having cost \$120,000, the switchboard and steering wheel being studded with diamonds, upholstery and rubies, and the clock inlaid with gems.

Heligoland Island Neglected

Usefulness To Germany As Giant Port Is Over

Heligoland Island, which Germany fortified to guard the entrance to the Elbe river, the shelter of the Kaiser's warships, against the British fleet, is crumbling away, slowly but surely.

Almost every fall, into the sea which the sandstone strata of the island. The latest large slide occurred early in December, when, following a heavy gale, 6,000 cubic meters of rock dropped into the sea. Since 1925, approximately 30,000 cubic meters there have been eaten away.

Heligolanders are demanding that Germany do something about it, the suggestion being that the ramparts constructed in the days before the big flare-up in the activities of the Kaiser be used further under the government's program for procuring work for the unemployed.

"The bit of news recalls the transfer of Heligoland Island in 1890 to the Germans by Britain in exchange for the island of Zanzibar in East Africa. Immediately after the war the Germans started to construct heavy armaments to protect the island from the incursions of the sea and also build thereon forts of exceptional power, offensive and defensive. This cost the Prussian state treasury at the time a fortune several times over. But since the German fleet went to the scrap in Scapa Flow and the Kaiser is chopping wood in Holland the island's usefulness as a giant fort has disappeared and it is being neglected."—St. Thomas Times-Journal.

To Assist Indians

Wants Plan To Aid Native Arts And Industries

Rev. George Taylor, of Barrie, B.C., was in Toronto recently with a new idea for rehabilitation of the Canadian Indian. He would like to see an association of national leaders organized to aid native arts and industries as a means of promoting the Indian's financial and communal security.

Dr. Halsey credited the Prince of Wales with being the best booster in recent years for products of the west coast Indians. The Imperial Order of Daughters of the Empire sent the Prince a Cowichan sweater, with the immediate result that 50 orders were received for such sweaters.

"If you want to spend a chilly week," says a traveler, "pay a visit to Siberia." Another method is to bring a crowd of the boys home to supper.

Using Steel Scaffolding

Builders In England Find It Better Than Wood

Development of the use of steel scaffolding in Great Britain indicates a possible development in Canadian construction, according to W. D. Lambie, Winnipeg, deputy British trade commissioner.

The steel scaffolding is being used in England as a substitute for the familiar wooden scaffolding with rope fastenings. The steel adds an element of safety to building hitherto lacking.

The new British steel product is available from longways or for skyscrapers. Recently when the British house of parliament at Westminster was repaired, pictures show, steel scaffolding was used and created a graceful screen of tracery over the historic building.

Equally interesting, Mr. Lambie adds, is the wide variety of uses to which the new units can be turned. They form the framework of the grandstands from which spectators view the famous "Tropics of the Colors" on the Horse Guards parade in London, and they are prominently in situ elsewhere where their advantages as camera supports for taking difficult shots have brought them into high favor.

In railway stations, shipbuilding yards, sports areas and exhibitions they are finding innumerable uses, and in short, represent a development of the British steel industry well worth watching.

The Biggest Objection

Lotteries Take Money That Poor Families Cannot Spare

Leaving moral or ethical questions out of consideration altogether, the objection to a lottery for the purpose proposed is that it would place the mass burden of unemployment relief upon the classes least able to carry the load. The great bulk of lottery money in all countries comes from the poorest classes, and represents in most cases involuntary sacrifices on the part of the family of the subscriber to the lottery—food taken from the mouths of undernourished children; or women and children deprived of warm clothes they might have had—Winnipeg Tribune.

Nominated For Peace Prize

The nomination of Marshal Joseph Pilsudski, minister of war in Poland, as a candidate for the Nobel peace prize was sent to the Nobel Foundation by the law department of Jacekiewicz university of Warsaw. The recommendation said Pilsudski's foreign policies promoted general peace.

Pleasure Being Missed By This Generation

Custom Of Sunday Afternoon Walk Is Out Of Date

Some customs and institutions pass away so swiftly and completely that a succeeding generation can scarcely realize to what extent such a custom was once prevalent and how much it meant to the generation that came before.

The boys and girls, younger men and women, who live in the cities can not appreciate how much the pastime known as the Sunday afternoon walk once meant to people who are now living in years. This diversion is not to be compared to what is now known as "hiking"; the Sunday afternoon walk was not so strenuous and energetic as this latter-day form of leg-exercise.

The modern hiker expects some tangible returns on his investments. He is out for air and exercise and he proposes to get them. Over the hill and dale along the country road he stretches his legs and the more he gets the better he likes it. Though he is not a particular destination in mind and sets no time limit on his performance, the modern hiker is none the less a very business-like person.

Not so the Sunday afternoon walker of a generation ago. He was a leisurely proceeding. He was in the neighborhood of romantic scenery, not of violent exercises. His performance consisted of nothing more strenuous than an amiable strolling about the parks of the city into which he did not venture every day, or perhaps his stroll took him a short way out into the country.

It is a gone, this custom. One by one conditions changed as mechanical inventions came in to cut us off from this simple pleasure. We were no longer in the pursuit of pleasure and diversion; we must be always going somewhere, and when we get there we must either be entertained or hurry off elsewhere.

The Weekly Newspaper

One Of The Most Potent Factors In Our National Existence

Turning from the city newspapers to the small town press exchange that comes to the editor's desk in the morning, the editor of the paper, stepping from the slum, full of vice, into an old fashioned garden sweet with lavender and thyme and the smell of crocuses, he is reminded of the big dailies are so full of murder, thievery, immorality and selfishness that the better news is obscured by these glaring shatterings of the Decalogue. One puts the papers aside with a feeling of depression and that comes to the editor's desk in the morning, the editor of the paper, stepping from the slum, full of vice, into an old fashioned garden sweet with lavender and thyme and the smell of crocuses, he is reminded of the big dailies are so full of murder, thievery, immorality and selfishness that the better news is obscured by these glaring shatterings of the Decalogue.

Then picking up the paper that record happenings of the little towns and villages, one gains renewed faith in life. Here are set forth only that which uplifts a community—the activities of the business men, the church men, the happy social gatherings of the people, the marriages, births and death, farmers' tales and all the thousand and one daily concerns that make up the simple annals of the great common people, who are really the foundation of this broad country of ours.

Localities are rarely published in the country newspapers, but if it happens that decency demands it, the uglier details are omitted, or given a kindly touch that is widely different from the unfeeling publicity of the city press. The offenders may be our neighbors or people we have not met, but all our lives, they are real human beings to their town people, while to the great city dailies they are merely grains of a sort that are swept out hourly in their news mills.

Sometimes people speak lightly of the country newspaper, but it is one of the most potent and uplifting factors in our national existence—Christian Science Monitor.

Is Not A GUY

Young women contemplating matrimony, will be interested in knowing that a Chicago court has held that an engagement ring is not a gift, and must be returned if the marriage ceremony is not performed. This ruling was made by Municipal Judge Howard Hayes in a suit brought by Lewis Howell for recovery of a ring given by his friend, who allegedly broke the engagement.

District Visitor—"I thought the doctor put you on a light diet, didn't he?"
Little—"I've not me diet, Miss Smith, and you 'ave 'aving me diet."

First Microscope Simple

Crude Magnifiers Were Used By Ancient Gem Cutters

Some sort of magnifier must have been in use from very early times, for it does not seem possible that the ancient gem cutters could have accomplished their work without some aid. Possibly the simplest microscope was a glass globe filled with water, for Plinius wrote in A.D. 68: "Letters however small and thin, are comparatively large and distinct when seen through a glass globe filled with water."

It is probable, too, that lenses of glass were also used, though the first mention of spectacles in which convex glasses were employed is made by Bernard de Gordon about 1307.

The first microscopes were very simple in construction, consisting of short tubes of any material that would give a clear sight, and a lens at one end and a glass plate was the other. On the glass plate was laid the object to be examined. Descriptions of simple microscopes in which the rays of light were reflected on the object by means of a concave mirror.

The highest development of the simple microscope was reached in the employment of lenses of very short focus. Robert Hook, Curator of the Royal Society, first investigated and formed in 1663, made these lenses by fusing a thread of glass until it formed a tiny ball, the ball was then spread to a certain diameter, the remaining of the stalk ground away. The tiny balls were then fixed with one into a pin hole made in a metal plate.

Far better lenses than these, however, were made by Anthony van Leeuwenhoek, the father of microscopy. The Dutchman, who was a simple man, spent a long life in perfecting his microscope and making observations with it. His instrument reached a high degree of perfection, and he was able to see with ease the minute creatures existing in the fluids of ponds, and even caught a glimpse of the still more minute bacteria.

The idea of combining two lenses in a microscope or a telescope, one concave and the other convex, has been attributed to several different inventors, but it is usually accepted that the discovery was accidentally made by a Dutch boy named Zacharias Janssen, who looked in the shop of his father, a spectacle maker. The great Italian scientist Galileo became acquainted with principles of the Janssen instrument, and immediately set to work to produce one for himself. Understanding the scientific theory of vision, he was able to do everything that had previously been produced.

And followed a great number of investigations, and constantly modified and improved the instruments they used.

Frederic Advertisements

Public Forgets Brands It Does Not Read About

Widespread preference by the nation's consumers for persistently advertised products was revealed in a survey of consumer requirements in four major markets—New York, Philadelphia, Pittsburgh and Milwaukee—conducted by J. David Houser Associates, research organization, under the auspices of Gimbel Brothers, Inc., operating department stores in the four cities.

Of twenty-four products in the wearing apparel and household furnishing groups, branded and nationally advertised merchandise were found specifically in demand; among these branded goods on which advertising has been particularly effective, were found to yield their popularity to the products being intensively promoted at the moment.

Wash Steel Works Opened

After an idleness of nearly two years Brynmawr steel works in North Wales is resuming, and employment has been given to more than 1,500 men. Henry Robertson, managing director of the company, said it is hoped to put all former employees back to work shortly.

The Strongest Timber

The yate, one of Australia's numerous hard woods, seems to be the strongest known timber, having an average tensile strength of 21,000 pounds to the square inch and a maximum as high as 30,000—about equal to cast and wrought iron.

The Netherlands may entice ship-building eastward.

Interesting Local Items

Mrs. W. J. Fairbairn spent the
week end in Calgary where she
visited her son Earl and family.

Mrs. W. Moran who has been
visiting her parents Mr. and Mrs.
Lavelle for the past few
weeks returned to her home in
Calgary on Friday.

Mr. and Mrs. H. Champ, and
their son, Eddie, left last Mon-
day for their old home in Eng-
land where they will reside in
future.

Farmers and ranchers of this
district report that stock has
been wintering exceptionally
well. There have been very few
casses and the stock is in excel-
lent condition.

Death toll throughout the
United States climbed to 60 as
a blizzard swirled through the
western states last weekend.
The deaths were caused by
snow, hail, rain, tornadoes and
cold.

The local Oxford Group will
hold an open meeting in Gordon
Memorial Schoolroom on Sunday
afternoon next at 3 o'clock and
on the first Sunday of each
month at the same time and
place hereafter until further
notice.

A car load of Alberta Perch-
eron horses is about to be shipped
to Glasgow. This reads like
"Shipping coals to Newcastle,"
as Scotland has for years been
the breeding paradise for heavy
draught horses, and where the
Clydesdales has always been
looked upon as the last word in
the heavy draught class.
